

Killer Vscode Keyboard Shortcuts

try these out

AVH

Bubble Lines

```
⌘ + <up or down>
```

- quickly rearrange a line or lines of code (LOC) in a file

Multiselect Pattern

⌘ + D

- select a variable, blast in ⌘+V edits or retype in multicursor mode for local bulk editing

Rename Symbol

`right click + "Rename Symbol"`

- rename variables across different files

Middle Mouse Button / Mouse Button 3 Multicursor

`mouse button 3 click + drag`

- multi-edit beginning or end of a bunch of contiguous LOC easily

Jump to Line Number

```
⌘ + P + : + <destination line number>
```

- jump to a particular file location quickly
